Do you travel a lot?

Do you talk to your friends and family back home frequently?

Are you tired of paying those outrageous long distance charges?

Then you are in luck. SKY-PEak will solve all of these problems. It is an Arduino based system that lets you access your home landline from any device that has a web browser.

SKY-PEak works by:

- Bridging the connection between a SKYPE account and your landline.
- Allowing you to dial numbers on that landline using your device’s web browser.

That means that you can use your mobile devices SKYPE account to talk with friends and family across your home landline. All you need is an active internet connection. You may be thinking that something this revolutionary is too expensive for you to consider. However, you can get yours today for the low price of:

$68.00

This is a one-time charge. There is no subscription required. Get yours today and never pay long distance charges again.
