Product of Nero Web IT consulting
What is Cabsec?

CabSec is an easy to use integrated system for intrusion prevention that can be installed on almost any device.

Once deployed to a location CabSec can give you the peace of mind you need by providing you with intrusion notifications and tracking wherever you are in the world!

Anywhere in the world?

Thanks to the modern interconnected world, we can no longer stay in one place to monitor our inventories or equipment 24/7. If you are on a trip, no problem, CabSec will tell you if there is intrusion and notify you via GPS coordinates where your equipment is anywhere it might have been moved to.

Using a fusion of integrated devices and web based connectivity CabSec will monitor and send notices right to your mobile device, and in some distributions even take active photographs of surroundings and report map locations of where the device has been moved, or what has been accessed!

Reliability

CabSec is designed to have 24/7 deployment 365 days a year constantly monitoring and with its integrated battery backup system it can continue to operate for up to 24 hours after mains power has stopped providing energy. So, even if your equipment has moved to a place with no power, it can still provide the necessary information to track down where it is in the world.

What We Provide

Peace of mind. You have enough to worry about without concerning yourself with the state of your equipment, with CabSec you can rest assured that it will never be lost to you.

“I can't recall what life was like before CabSec, it has been a godsend”

—Henry Briggs small business owner Winchester KY

Security and reliability you can trust. That's the very essence of CabSec.

Features

- Always on intrusion detection
- Straight to your phone notices of equipment tampering
- Configurable for multiple deployments across varied devices
- Battery backup to prevent loss even when power has failed.

More Information
