Ready to go in a few easy steps!

**Why bother with Retro gaming on Raspberry Pi?**

Retro gaming through Retro Pie is a fantastic way to get started on your own little emulation station!

- As simple as “Flash and go” with an OS installation
- Provides a highly customizable platform with a great degree of market support for peripherals
- A machine as complex or simple as you want it to be

**What are the details?**

This project was a simple yet challenging endeavor, requiring skills in

- Electronics
- Time Management
- Software
- Command Line Navigation

And could even be expanded to include networking skills if you wanted to host your files from a local server instead of on the Pi!

**But why would you put so much effort into this?**

The short and sweet answer is that it’s a labor of love. Gaming has been a hobby all my life and is one of the ways I like spending my down time. I felt that this project was a way I could spread what I enjoy and inform others on how to do the same. Whether new or old.
