Email: Daniel_hubbs2@mymail.eku.edu
Raspberry Pi 3 Model B

The Raspberry Pi hosts a webpage that displays a button that will trigger the relay and tell the garage door to open or close.

2-Channel 5V Relay

This relay is connected to the garage door opener and when it is triggered, the door open or close depending on its position.

What this device does:
- Convenient door control from your phone
- Status report on the position of the door
- Peace of mind that you know if you did in fact remember to close the garage

Magnetic Switches used for door status reading
